DETAILED ACTION

Specification

1. The Heritage Packaging header should be removed from the first page of the specification and the drawing sheet.

Claim Objections

2. Claim 1 is objected to because of the following informalities: the claim is not numbered. Appropriate correction is required. For examination purposes, the pending claim is designated as claim 1.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. A claim can contain only a single sentence. Claim 1 contains a plurality of sentences. For examination purposes, only the first sentence of the claim has been examined.

Furthermore, claim 1 is rejected under 35 U.S.C. 112, second paragraph because it contains limitations within parenthesis. It is not clear if the limitations within said parenthesis are part of the claim.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 1773

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claim 1 is rejected under 35 U.S.C.102(b) as being anticipated by DE 3518625A1 (herein referred to as Moog). Moog teaches a laminate for packaging a material that comprises a layer of polyethylene terephthalate, an aluminum foil layer, and a polyethylene heat sealable layer comprising a corrosion-inhibiting component (abstract and FIGURES).

7. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Miksic et al (US 5,855,975). Miksic teaches a laminate comprising a metallic center layer, a layer comprising a corrosion inhibitor, and a biaxially oriented PET (claim 12).

Claim Rejections - 35 USC § 103

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

9. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Dahringer et al (US 5,689,878) in view of Miksic et al (US 5,139,700).

Dahringer teaches a metallized enclosure used to package electronic components that is designed to protect the packaged article from static buildup (abstract). The enclosure comprises multiple layer of polymeric barrier films such as PVDC, ionomers, PET, and the like, a metal foil layer, and an inner layer comprising a heat sealable polyethylene (col 5, lines 24-col 6, line 19).

Dahringer does not teach that the heat sealable layer should comprise a corrosion inhibitor therein. However, Miksic teaches a film comprising a vapor phase corrosion inhibitor therein (abstract). Miksic teaches such a film is useful as the interior film of a multi-layer film designed to protect a metallic article from static buildup (col 4, lines 44+). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to add a vapor phase corrosion inhibitor to the interior film of the laminate taught in Dahringer. The motivation for doing so would have been to prevent corrosion of the metallic article that the film will package.
